GENERAL PRODUCT OVERVIEW

The Glycol Feed System is a mobile unit that is designed to simplify the process of charging a large water loop with product. It is an all in one unit that includes a booster pump, suction and discharge hoses with quick disconnect fittings, pre-wired on/off switch, and a convenient support bracket to secure the hoses to for transport and/or storage. It is all installed on a heavy duty hand truck dolly that makes it easy to transport, and requires very little floor space to set it up.

PRODUCT FEATURES

- Equipped with a Haight Internal gear, positive displacement booster pump
- Prewired on/off switch with a male connection
- Supplied with 30' of high pressure hose
- Equipped with a fold-away bracket for hose storage
- Quick disconnects are supplied for the connections to the pump and the point of injection.
- Schedule 80 suction stinger to insert into a drum or tote
- Installed on an industrial strength hand truck dolly
